Chintha Kalyan

Warangal

Professional Summary

AI Engineer and Data Scientist skilled in Python, Machine Learning, Deep Learning, NLP, TensorFlow/Keras, Scikit-learn, SQL, nd LLM applications.

Technical Skills

• **Programming & Data Analysis:** Python, NumPy, Pandas, Jupyter Notebook, Google Colab

• **Database:** MySQL, CRUD Operations, Joins, Views, Stored Procedures, RDBMS

• **Visualization:** Data Visualization, Matplotlib, Seaborn

• **Machine Learning:** Regression, Classification, Clustering, KNN, Decision Trees, Logistic Regression

• **Deep Learning:** Neural Networks, TensorFlow, CNN Basics

• **Generative AI & NLP:** LLMs ,Fine-Tuning, LangChain , NLTK , TF-IDF, RNN , LSTM ,BERT , RAG, VectorStores

• **Tools:** Google Colab, Anaconda, Jupyter Notebook

Projects

Swiggy Delivery Time Prediction (Machine Learning)

- Developed a regression model to predict food delivery time using order details, restaurant location, delivery partner information, traffic conditions, weather, and distance features.
- Performed data preprocessing, missing-value handling, outlier treatment, categorical encoding, and feature engineering to improve model performance.
- Trained and compared multiple regression algorithms, selecting the best-performing model using MAE, RMSE, and R^2 Score.
- Built an end-to-end prediction pipeline using Python and Scikit-learn for accurate and scalable delivery time estimation.

Mobile Price Prediction using ANN (Regression)

- Developed an Artificial Neural Network (ANN) regression model using TensorFlow/Keras to predict mobile phone prices based on hardware specifications.
- Performed data preprocessing, missing-value handling, feature scaling, and train-test splitting to improve model performance.
- Designed and trained a deep neural network using appropriate activation functions, optimizer, and loss function for regression tasks.
- Evaluated the model using MAE, MSE, RMSE, and R^2 Score to measure prediction accuracy and overall model performance.

Movie Review Sentiment Analysis using Word2Vec & LSTM

- Developed a deep learning-based sentiment analysis model using Word2Vec embeddings and LSTM to classify movie reviews as positive or negative.
- Performed text preprocessing including text cleaning, tokenization, stop-word removal, and sequence padding to prepare data for deep learning.
- Generated semantic word embeddings using Word2Vec to capture contextual relationships and improve text representation.
- Trained and evaluated the LSTM model to accurately predict review sentiment using contextual sequence learning.

AI Gym Trainer Assistant (LangChain + Groq LLM)

- Developed an AI-powered fitness assistant using LangChain and Groq LLM to generate personalized workout plans, nutrition guidance, and wellness recommendations.
- Implemented prompt engineering, conversation management, and domain-specific knowledge retrieval to provide accurate, context-aware fitness coaching.
- Designed a modular AI workflow capable of handling user queries related to exercise routines, diet planning, calorie tracking, and healthy lifestyle recommendations.
- Built an extensible architecture supporting Retrieval-Augmented Generation (RAG), memory integration, and external tools to enhance personalization and scalability

Education

B.Tech CSE (IoT) – Balaji Institute of Technology and Science (2022–2025)
Data Science Program – Innomatics Research Labs(present)
