EDUCATION

Master of Artificial Intelligence and Data Science 2023 – 2025
Karunya Institute of Technology and Sciences | CGPA: 8.0

Bachelor of Computer Science 2020 – 2023
Marudhar Kesari Jain College | CGPA: 8.6

INTERNSHIP EXPERIENCE

AI Intern, *Auzmor Technology Pvt. Ltd* 05/2024 – 06/2024 | Chennai, India
Course Recommendation Engine - scikit-learn, NLP, TF-IDF, Cosine Similarity, Dify

- Developed a content-based recommendation system using TF-IDF vectorization and cosine similarity across 3,000 Udemy courses, matching user education profiles to semantically relevant content with ranked retrieval.
- Designed a 5-stage modular ML pipeline (text normalization, feature engineering, similarity computation, popularity-weighted scoring, ranked retrieval) and exposed it via a Dify, reducing manual course search effort by ~70%.

SKILLS

Programming: Python (NumPy, Pandas, OOP), SQL

Machine Learning: Regression, Classification, XGBoost, LightGBM, Hyperparameter Tuning

Deep Learning: ANN, CNN, RNN, LSTM, Transformers (BERT), PyTorch, TensorFlow

NLP: TF-IDF, Bag of Words, Text Preprocessing

LLM & GenAI: BERT, LLMs, RAG, LangChain, LangGraph, MCP

Statistics: Probability, Hypothesis Testing, Linear Algebra, Regression Analysis

Soft Skills: Leadership, Teamwork, Adaptability

PROJECTS

League of Legends Esports Analytics
- Designed a fully normalized (3NF) MySQL schema integrating 25,000 match records through structured ETL workflows with enforced referential integrity.
- Optimized join operations and aggregation queries to improve retrieval efficiency for high-volume analytical workloads.

Crop Yield Forecasting System, *scikit-learn, XGBoost, LightGBM, Gradio*
- Performed data preprocessing and feature engineering, including handling missing values and scaling numerical features to improve model performance.
- Trained and compared XGBoost and LightGBM regression models with systematic hyperparameter tuning to optimize generalization on sequential data.

RupeeRadar — Indian Crypto Intelligence Platform
- Designed and implemented a multi-agent AI system using Model Context Protocol (MCP) to orchestrate specialized agents (market, sentiment, tax, arbitrage) with parallel execution and dynamic tool selection
- Integrated Large Language Models (LLMs) with real-time APIs (CoinGecko, NewsAPI, exchange APIs) to build an intelligent query-processing pipeline with response synthesis and fallback mechanisms.

CERTIFICATIONS

- Python Programming - Innomatics Research Lab
- Machine Learning - Perfect eLearning
- Google Advanced Data Analytics - Coursera
