CAREER OBJECTIVE

Aspiring data professional seeking an entry-level opportunity in Data Science or Data Analytics to apply analytical thinking and problem-solving abilities to real-world business challenges. Eager to contribute to data-driven decision-making, generate meaningful insights, and grow through practical industry experience.

EDUCATION

Data Science, *Innomatics Research Labs* 2025 – 2026 | Hyderabad, Telangana

Bachelor Of Technology- Data Science, *TKR College Of Engineering & Technology* 2021 – 2025 | Hyderabad, Telangana

Intermediate-MPC, *KLN Jr College* 2019 – 2021 | Miryalaguda, Telangana

SSC, *SPR Schools of Excellence* 2019 | Miryalaguda,Telangana

SKILLS

- Python
- Power BI
- SQL
- Machine Learning
- Deep Learning
- Natural Language processing
- Computer Vision & CNN

PROJECTS

Swiggy Delivery Time Prediction using ML

- Developed a machine learning model to predict food delivery time using rider, order, traffic, weather, distance, and temporal features.
- treamlined the ML workflow with data cleaning, feature engineering, categorical encoding, numerical scaling, feature selection, and Scikit-learn Pipeline integration.
- Benchmarked Linear Regression, KNN, Decision Tree, Random Forest, and XGBoost, with XGBoost achieving **R^2 0.8145, MAE 3.23 minutes, and RMSE 4.06 minutes**, deployed the model using Streamlit.

AI-Powered Driver Drowsiness Prediction System using Computer Vision

- Monitored driver alertness in real time through webcam video streams using Python, OpenCV, and MediaPipe facial landmark detection.
- Quantified eye and mouth movements with Eye Aspect Ratio (EAR) and Mouth Aspect Ratio (MAR) to recognize prolonged eye closure and yawning behavior.
- Established a frame-based warning mechanism that identifies sustained fatigue patterns and generates timely safety alerts.

World Wide Energy Consumption Analysis | MySQL

- Integrated 6 relational datasets containing 16,000+ records to examine energy production, consumption, emissions, GDP, and population across 230 countries.
- Applied advanced SQL techniques including CTEs, window functions, joins, subqueries, and aggregations to uncover multi-year energy trends.
- Derived per-capita consumption, emission intensity, and energy-to-GDP efficiency metrics for cross-country sustainability and economic comparisons.

Global EV Sales 2010–2024 | Power BI

- Analyzed 12K+ global EV records to identify adoption patterns, regional performance, market growth, and powertrain distribution.
- Transformed and standardized raw data using Power Query and created DAX measures for customized analytical metrics.
- Designed an interactive Power BI dashboard with KPIs, slicers, filters, and visualizations to communicate EV market trends.

CERTIFICATES

- Certification in Applied Machine Learning from Innomatics Research Labs
- Certification in Python Programming from Innomatics Research Labs
- Certificate in Data Analysis with MySQL from Innomatics Research Labs
- Event Facilitator – Beyond Tech 2.0 & 3.0 | Tech Boy Deepak & SDC | Microsoft, Building 3, Hyderabad
- Certification in Power BI from Innomatics Research Labs
- Event Facilitator – Launchpad | Tech Boy Deepak & SDC | Microsoft, Building 3, Hyderabad
