Sreekanth Vutukuru *Data Scientist*

Hyderabad

Education

08/2025 – 12/2025 Hyderabad
Innomatics Research Labs
Training institute

2001 – 2003
MBA (HR)
Kakatiya University, Khammam

Skills

PYTHON •
Anaconda, Jupyter Notebook, Colab Notebook, syntax, Identifiers & Operators, Array, Numpy, Data Manipulation, Pandas

Advanced Statistics
Descriptive Statistics, Probability Distribution, Data Gathering Techniques, Inferential Statistics.

Machine Learning
Supervised, Unsupervised, ML Algorithms, Validation Methods, Naive Bayes, Linear Algebra, K-NN, Hyperparameters, Dimensionality, Decision Tree, Linear regression, Evaluation Metrics, Regression Techniques, Q-Q Plot, MSE & RMSE, Polynomial regression, Regularization Techniques, Logistic Regression, Hierarchical Clustering.

MYSQL
MYSQL, NoSQL, CRUD operation, RDBMS, Data Exploration and Data Filtering, DQL and Operators, Clauses, Joins, ACID, COMMIT, ROLLBACK.

Power BI
Power BI workflow, Visualisation, Trend Data viz, Power Queries, Power Pivot, DAX, DA Expression, Web & RLS, Visual Interactions, Drill Through.

Natural Language Processing

NLTK, spacy, BOW, TF-IDF, Glove, Fast text, RNNs, LSTMs, Auto Encoders,BERT

Projects

1. ML Using Smart Cancer Prediction Web App
- Built an interactive cancer prediction web application using Python, Scikit-learn, and Streamlit, enabling real-time prediction based on user inputs such as age, tumor characteristics, symptoms, and lifestyle factors.
- Engineered data preprocessing and feature handling pipelines with Pandas & NumPy to ensure reliable model performance and compatibility with varied patient data.
- Trained and evaluated a supervised machine learning model (classification) to estimate cancer likelihood, achieving robust prediction capability for end users.
- Developed a responsive UI with Streamlit and deployed the app on Hugging Face Spaces, allowing seamless input, prediction output, and model interaction in a web environment.
- Implemented model serialization using Pickle and integrated backend logic to support end-to-end ML application workflow, demonstrating proficiency in deployment and production-ready ML systems.

2. MY-SQL Using Employee Management System (EMS)
- Designed and implemented a relational Employee Management System using 6 interconnected tables, covering employees, departments, payroll, leaves, and qualifications for real-world HR analytics use cases.
- Created a detailed ER diagram with primary and foreign key constraints, applying CASCADE and SET NULL actions to maintain referential integrity and data consistency.
- Wrote 20+ complex SQL queries using JOINs, subqueries, and aggregations to analyze department-wise salary distribution, bonuses, and employee compensation trends.
- Performed HR analytics to identify top-paid employees and job roles and to evaluate leave patterns and their impact on payroll costs, supporting data-driven decision-making.
- Utilized MySQL to demonstrate strong skills in SQL optimization, analytical thinking, and database design, completing the project as part of hands-on training at Innomatics Research Labs.

3. POWER-BI Using Movie Sales Analysis.
- Developed an interactive Power BI dashboard analyzing data belongs to movie sales from 2006–2016,
- Visualized Genre wise, Revenue wise, Year wise movie data.
- Displayed charts showing clear trends in terms of revenue, genre and provided insights for the better revenue.

Certificates

- Python Programming From Innomatics Research labs

Languages

- English
- Telugu
- Hindi
