Education

06/2025 — Hyderabad, India
Bachelor of Technology - Computer Science
Christu Jyoti Institute of Technology and Science
CGPA 7.77/10

08/2025 — Hyderabad, India
Data Science
Innomatics Research Science
Coursework in Python, Statistics, Data Analysis, SQL + PowerBI, ML, DL, GenAI, NLP, Computer Vision

Skills

Python
- Python: Anaconda, Jupyter Notebook, Colab Notebook, syntax, Identifiers & Operators, Array, Numpy, Data Manipulation, Pandas

Statistics
- Descriptive & Inferential Statistics, Probability, Hypothesis Testing

PowerBI
Data Modeling, DAX, Power Query, Dashboard Development, KPI Analysis, Report Publishing

SQL
- MYSQL, NoSQL, CRUD operation, RDBMS, Data Exploration and Data Filtering,

Tools:
- Jupyter Notebook, Anaconda, Git, Power BI Desktop

PROJECTS

1. Analysis of Air Conditioner Pricing and Energy Efficiency Using E-Commerce Data
- Performed data preprocessing, cleaning, and exploratory data analysis (EDA) on e-commerce datasets of air conditioners using Python in Jupyter Notebook.
- Conducted feature engineering and analyzed pricing patterns with respect to energy efficiency ratings, capacity, brand, and product specifications.
- Identified key factors influencing AC pricing, including star rating, inverter technology, capacity (tons), and brand positioning.
- Created data visualizations to uncover trends and insights on pricing and energy efficiency, supporting informed decision-making.

Technologies Used: Python, Pandas, NumPy, Matplotlib, Seaborn, Jupyter Notebook, Data Analysis

2. Grocery Store Management System Using SQL
- Designed and implemented a relational database system to manage inventory, sales, customers, and suppliers using SQL.
- Developed complex SQL queries using joins, subqueries, aggregations, views, and stored procedures for business intelligence.
- Analyzed sales trends, product movement, and stock availability to optimize inventory management and stock replenishment.
- Improved reporting efficiency, reduced stock-out frequency, and supported data-driven business decisions.

Technologies Used: MySQL, SQL, Database Design, ER Modeling.

3. Global EV Sales Analysis
- Performed data cleaning and transformation using Power Query in Power BI on global electric vehicle (EV) sales datasets.
- Built interactive dashboards to visualize sales trends, regional adoption patterns, and year-wise growth of EVs.
- Developed DAX measures to analyze key metrics such as total sales, growth rate, and category-wise performance.
- Identified insights on market trends, leading regions, and adoption patterns to support data-driven decision-making.

Technologies Used: Power BI, DAX, Power Query, Data Visualization

4. Swiggy Delivery Time Estimation Using Machine Learning
•Performed comprehensive data preprocessing, feature engineering, and exploratory data analysis (EDA) on large-scale food delivery datasets. •Built and evaluated multiple machine learning models to accurately predict delivery time. •Identified key factors such as delivery distance, traffic conditions, weather, location, and order characteristics influencing delivery performance. •Improved prediction accuracy to support optimized logistics planning, faster deliveries, and enhanced customer satisfaction. •Technologies Used: Python, Pandas, NumPy, Scikit-learn, Matplotlib, Seaborn, Machine Learning.

Languages

- English
- Telugu

Certificates

- Certification in Python Innomatics Research Labs
- Certification in MySQL Innomatics Research labs
- Certification in Power BI Innomatics Research Labs
- Certification in EDA Innomatics Research Labs
