R. RANJITH KUMAR

Data Science Aspirant

Hyderabad, India LinkedIn GitHub

Professional Profile

Analytical and results-oriented Data Science aspirant with a strong foundation in Python, SQL, and Machine Learning. Proven ability to handle the end-to-end data lifecycle—from automated web scraping using Selenium to predictive modeling and interactive storytelling via Power BI. Adept at identifying business trends and optimizing operational efficiency through data-driven insights. Quick learner with a CGPA of 8.0 and a passion for solving complex real-world problems through advanced analytics.

EDUCATION

Data Science, *Innomatics Research Labs*
- Coursework: Python, Statistics, Data Analysis, SQL + Power BI, Machine Learning, Deep Learning, NLP, Computer Vision

Bachelor of Commerce - Computer Applications, *Haindavi Degree & PG College*
- CGPA: 8.0

SKILLS

Python
Anaconda, Jupyter Notebook, NumPy, Pandas, Data Manipulation, Matplotlib, Identifiers & Operators, Array

Advanced Statistics
Descriptive Statistics, Probability Distribution, Data Collection Techniques, Inferential Statistics

Machine Learning
Supervised & Unsupervised Learning, Linear Regression, Logistic Regression, KNN, Naive Bayes, Decision Tree, Model Evaluation (MSE, RMSE)

SQL
MySQL, CRUD Operations, RDBMS, Data Exploration, DQL, Joins, Clauses, ACID, COMMIT, ROLLBACK

Power BI
Data Modeling, Power Query, Power Pivot, DAX, Dashboards, RLS, Visual Interactions, Drill Through

LANGUAGES

- English, Tamil, Telugu, Hindi

PROJECTS

Cricket Data Analysis Using Python
- Conducted exploratory data analysis on cricket statistics by extracting player performance data from ESPN Cricinfo using Selenium and BeautifulSoup.
- Performed data cleaning and transformation using Pandas and NumPy to structure raw web data into analytical format.
- Analyzed matches, runs, averages, and strike rates to identify performance trends and player consistency.
- Generated meaningful insights through data visualization for sports analytics applications.

Music Store Management System Using SQL
- Conducted comprehensive analysis of music store transactional data to manage sales, customer activity, and inventory using SQL.
- Utilized advanced SQL techniques such as joins, subqueries, aggregations, and views to extract insights from large datasets.
- Identified key sales trends, popular genres, and customer purchasing patterns to support business decision-making.
- Improved reporting efficiency and optimized store operations through data-driven insights.

Movie Sales Analysis Using Power BI
- Conducted detailed analysis of movie sales data to monitor revenue trends and customer behavior using Power BI.
- Applied data modeling and DAX calculations to create interactive dashboards and dynamic reports.
- Identified seasonal trends, genre performance, and regional sales insights to assist strategic planning.
- Enhanced business intelligence reporting through visual analytics and data storytelling.

Swiggy Delivery Time Prediction Using Machine Learning
- Conducted predictive analysis on food delivery data to estimate delivery time accurately using machine learning techniques.
- Applied data preprocessing, feature engineering, and model evaluation methods to improve prediction performance.
- Identified key influencing factors such as distance, traffic, and order details affecting delivery time.
- Improved operational efficiency and customer satisfaction through accurate time prediction models.

CERTIFICATIONS

- Certification in Python - Innomatics Research Labs
- Certification in MySQL - Innomatics Research Labs
- Certification in Power BI - Innomatics Research Labs
