Sai Rathan Sumbet

Data Analyst | Data Scientist | ML Engineer

Hyderabad, IN • +91 7981158034 • rathansumbet@outlook.com • linkedin.com/in/rathan-sumbet • github.com/sumbet-rathan

Professional Summary

Data Science professional with 2+ years of US Recruiter experience, skilled in Python, SQL, Power BI, and Machine Learning. Built hands-on projects spanning ANN-based intrusion detection, ML prediction models, SQL analytics, and Power BI dashboards — combining strong stakeholder management with technical data skills.

Projects

EduMentor AI: Multi-Chain LLM Educational & Interview Assistant

- Built EduMentor AI, a multi-functional educational assistant using LangChain and OpenAI (GPT-4o-mini) to automate learning material generation, academic note analysis, and technical interview preparation.
- Designed modular LCEL processing chains leveraging RunnableParallel to concurrently execute zero-shot and role-based prompts for topic summaries, MCQs, study flashcards, knowledge gap detection, and mind maps.
- Deployed an interactive multi-tab web application using Streamlit to deliver structured study materials, conceptual takeaways, and customized 4-week interview roadmaps.

MediScribe AI: Clinical Named Entity Recognition (NER)

- Built an end-to-end clinical NER pipeline fine-tuning BioBERT on 16,000+ BC5CDR abstracts to extract Diseases and Drugs from unstructured medical notes.
- Implemented subword label alignment and custom span-merging algorithms to fix token fragmentation, achieving 97.55% accuracy and an 87.38% strict F1-score.
- Deployed an interactive Gradio web application on Hugging Face Spaces featuring live text entity highlighting and structured JSON schema exports.

Network Intrusion Detection System Using Neural Networks — GitHub

- Developed a binary classification model using Artificial Neural Networks (ANN) to identify network traffic as Normal or Attack using the CICIDS2017 dataset.
- Performed data preprocessing including missing-value and duplicate handling, feature selection, label transformation, scaling, and class-weight balancing.
- Built and evaluated the ANN model using precision, recall, F1-score, confusion matrix, and ROC-AUC, achieving 95% test accuracy 0.999 ROC-AUC and Recall 100% which is more import for this project.

Swiggy Delivery Time Prediction Using Machine Learning — GitHub

- Developed a regression model to predict food delivery time using factors such as traffic, weather, distance, rider information, and order details.
- Performed missing-value handling, categorical encoding, feature scaling, and feature preparation using Python and Scikit-learn.

- Built an XGBoost Regressor and optimized hyperparameters using Optuna, improving test R^2 from 0.810 to 0.818.

Skills

Python: Pandas, NumPy, Matplotlib, Seaborn, Data Cleaning, EDA, Feature Engineering, Statistical Analysis, Scikit-learn

SQL: SELECT, Joins, Subqueries, CTEs, Window Functions, Aggregations, Query Optimization, Triggers, Stored Procedures, Data Pipelines, Workflow Automation

Power BI: Data Modeling, DAX, Interactive Dashboards, Power Query, Data Transformation, KPI Reports, Slicers, Drill-through, Dashboard Design

Machine Learning: Supervised Learning, Predictive Modeling, Feature Engineering, Model Evaluation, Scikit-learn

Deep Learning: Artificial Neural Networks (ANN), Neural Network Architecture, Forward Propagation, Backpropagation, Activation Functions, Loss Functions, Optimizers, Dropout, Early Stopping, Model Evaluation

Statistics: Probability, Hypothesis Testing, Distributions, Correlation, Regression Analysis

Natural Language Processing (NLP): Tokenization, Named Entity Recognition (NER), BioBERT, Transformers, Subword Alignment, Text Preprocessing, Seqeval, Hugging Face.

Generative AI & LLMs: LangChain (LCEL), OpenAI API (GPT-4o), Prompt Engineering, Parallel Chains (RunnableParallel), RAG Architectures, Streamlit, Gradio**.**

Experience

Futran Solutions *11/2024 – 04/2025*

US Recruiter | Recruiting & Reporting Analyst Hyderabad, IN

- Cleaned and analyzed hiring pipeline data from Ceipal and LinkedIn to track drop-offs and improve conversion rates.
- Built operational tracking reports to prioritize open roles, balance team workload, and reduce time-to-fill.
- Developed daily and weekly performance dashboards tracking submissions, interview-to-offer ratios, and recruiter KPIs for leadership.
- Monitored recruitment lifecycle data under a Prime Vendor BMS model to ensure SLA compliance and data accuracy.

Lance Soft *02/2023 – 07/2024*

US Recruiter | Recruiting & Reporting Analyst Hyderabad, IN

- Extracted, queried, and screened candidate datasets across JobDiva, LinkedIn, and external platforms to support hiring for enterprise accounts including Abbott, J&J, BMS, and GSK.
- Analyzed end-to-end recruitment funnel data across contract, C2H, and permanent roles, identifying bottlenecks to optimize submission-to-interview conversion rates.

- Tracked and evaluated pipeline metrics and fulfillment trends across enterprise client accounts, utilizing structured candidate data to improve placement accuracy and operational predictability.

Sheetal Solutions *07/2022 – 01/2023*
US Recruiter Gurugram, IN (Remote)

- Sourced and screened candidates for contract, contract-to-hire, and permanent roles across IT, IT Security, and Cyber Security domains in the U.S.
- Successfully recruited for roles including Security Analysts, Security Engineers, Penetration Testers, SOC Analysts, Splunk Developers, and Network Security Engineers, maintaining strong submittal-to-placement conversion.
- Managed relationships with consultants, clients, and Prime Vendors including CrowdStrike, Akamai, CyberArk, Cisco, IBM, and McAfee while building proactive talent pipelines.

Education

ACE Engineering College *2017 – 2021*
B. Tech – Electronics & Communications Engineering Hyderabad, IN

Course

Innomatics Research Labs *01/2026 – Present*
Data Science & AI Training Program Hyderabad, IN

Certificates

- Python Programming
- Power BI
- Exploratory Data Analysis
- Data Analysis with MySQL
- Machine Learning
