SUMMARY

Aspiring Generative AI Engineer and Data Science graduate with hands-on project experience building LLM-powered applications, prompt engineering systems, and NLP/deep learning pipelines using Python, OpenAI APIs, TensorFlow/Keras, and Streamlit. Foundational expertise in prompt engineering, system-prompt design, embeddings (Word2Vec), sequence models (LSTM/BiLSTM), and end-to-end ML pipeline deployment. Trained at Innomatics Research Labs with a strong analytical foundation in Python, SQL, and data-driven problem solving. Eager to contribute to production-grade Generative AI and applied ML systems that deliver measurable outcomes.

EDUCATION

Sample University College Toronto, Canada
B.Sc. – Data Science (B.Sc. MSDS) | Percentage: 74.4% 2022 – 2025

PROJECTS

AI Prompt Engineering Assistant Python, OpenAI API, Streamlit
● Built and deployed an LLM-powered web app ("PromptPro") that converts vague user prompts into clear, structured, high-quality prompts using the OpenAI GPT-4.1-mini API.
● Authored a detailed system prompt encoding prompt-engineering best practices — role, task, context, constraints, and output format — for consistent, high-quality LLM responses.
● Implemented a custom Streamlit UI with secure, environment-based API key management (dotenv) for production-style configuration.
Smart Loan Risk Analyzer Python, Scikit-learn, XGBoost, Streamlit
● Developed and deployed an end-to-end ML web application predicting loan default risk and approval eligibility from applicant financial and credit data.
● Engineered features (loan-to-income ratio, credit-score-based interest logic) and served a trained classification pipeline via Pickle for real-time inference.
● Built an interactive multi-column Streamlit interface with live risk probability, approval-chance metrics, and class-imbalance handling (Imbalanced-learn).
Amazon Product Review Sentiment Analysis Python, NLTK, Word2Vec, TensorFlow/Keras (LSTM)
● Built an end-to-end NLP pipeline on Amazon review data: text cleaning, stopword/negation handling, and exploratory analysis (word frequency, review-length distribution).
● Trained custom Word2Vec embeddings and built an embedding matrix to initialize an LSTM/Bidirectional LSTM deep learning sentiment classifier.
● Tuned the model with dropout regularization and early stopping; evaluated performance via accuracy curves, confusion matrix, and classification report.

TECHNICAL SKILLS

Generative AI & LLMs: OpenAI API (GPT-4.1-mini), Prompt Engineering, System Prompt Design, LangChain (Aware), LLM-Integrated App Development
NLP & Deep Learning: TensorFlow, Keras (LSTM, Bidirectional LSTM), Word2Vec (Gensim), Tokenization & Embeddings, NLTK, Sentiment Classification
Machine Learning: Scikit-learn, XGBoost, Imbalanced-learn, Feature Engineering, Model Pipelines, Classification & Risk Scoring
App Development & Deployment: Streamlit, Python, Pickle Model Serving, dotenv/Environment Config, Git, GitHub
Data & Analytics: Python (Pandas, NumPy, Matplotlib, Seaborn), SQL, Power BI (DAX, Power Query), Excel
Behavioural Competencies: Analytical Problem-Solving, Quick Learner, Attention to Detail, Collaboration & Teamwork, Data Storytelling

CERTIFICATIONS

Power BI Data Visualization Certificate – Sample Training Institute | Python Programming Certificate – Sample Training Institute

ADDITIONAL INFORMATION

Willing to Relocate: Yes – Anywhere | Employment Type: Full-Time | Availability: Immediate Joiner
