github.com/BADUGU-SRICHETAN

SUMMARY

Computer Science Engineering graduate specializing in Artificial Intelligence and Machine Learning, with hands-on experience developing end-to-end solutions across Machine Learning, Deep Learning, NLP, Computer Vision, and Generative AI. Skilled in transforming data and AI concepts into functional applications, with experience in model development, text processing, neural networks, LLM-based applications, RAG, and AI agent evaluation. Strong problem-solving mindset with a focus on building practical AI solutions and continuously expanding expertise in emerging AI technologies.

EDUCATION

Data Science with GEN AI, Innomatics Research Labs 01/2026 – 10/2026 | Hyderabad, Telangana
Coursework in Python, Statistics, Data Analysis, SQL + PowerBI, Machine Learning, Deep Learning ANN

B.E [CSE (AI-ML)] 11/2022 – 05/2026 | Hyderabad, Telangana
BHARAT INSTITUTE OF ENGINEERING AND TECHNOLOGY
CGPA - 7.25

SKILLS

Languages & Core:
Python, OOP, Data Structures, NumPy, Pandas, Git, SQL

Computer Vision:
CNN, Image Classification, Image Preprocessing, Image Augmentation, VGG16, OpenCV, Object Detection, YOLO, Transfer Learning

Generative AI :
Generative AI, LLMs, Transformers, BERT, GPT, LangChain, RAG, Embeddings, Vector Stores, Semantic Search, Prompt Engineering, LLM Integration, AI Agent Evaluation, LLM-as-a-Judge

AI/ML:
Machine Learning, Deep Learning, Scikit-learn, TensorFlow, Keras, ANN, CNN, Model Optimization & Evaluation, Feature Engineering, Hyperparameter Tuning, Cross-Validation, SMOTE

NLP:
Natural Language Processing, Tokenization, Text Preprocessing, TF-IDF, N-Grams, Word2Vec, CBOW, Skip-Gram, Text Classification, Attention Mechanism, Next-Word Prediction

PROJECTS

EvalForge – AI Agent Evaluation System, Gen AI 08/2026 – 09/2026
- Developed an AI Agent evaluation platform using Python, LangChain, OpenAI and Streamlit.
- Implemented an LLM-as-a-Judge framework to evaluate responses for Correctness, Relevance, Instruction Following, Hallucination and Safety.
- Built criterion-wise scoring, feedback, conversational memory and evaluation history for systematic AI response assessment.

AI-Powered Job Market Intelligence & Skill Gap Analysis System, NLP
- Developed an NLP-based job market analysis system using Python and Transformers to analyze 120K+ LinkedIn job postings.
- Implemented skill extraction, job-role classification and in-demand skill analysis from job descriptions.
- Built resume–job matching and skill-gap analysis using NLP and semantic similarity techniques.

Heart Diseases Prediction, Deeplearning , ANN
- Developed an ANN-based binary classification model to predict the likelihood of heart disease using patient health indicators.
- Preprocessed and balanced the dataset using feature scaling and SMOTE to improve minority-class learning.
- Built and optimized a TensorFlow/Keras neural network using Dense layers, ReLU/Sigmoid activations, Dropout, Batch Normalization, and Early Stopping.
- Evaluated the model using Precision, Recall, F1-score, Confusion Matrix, Accuracy, and ROC-AUC.

Swiggy Delivery Time Prediction, Machine Learning
- Developed an XGBoost regression model to predict food delivery time using order, restaurant, delivery partner, and location features.
- Performed data preprocessing and feature engineering, achieving an R^2 score of 0.8623.
- Deployed the prediction model using Streamlit for interactive delivery-time predictions.
