Professional Summary

Data Science & AI/ML Engineer with hands-on experience in deep learning, predictive modeling, computer vision, and REST API development. Proficient in building end-to-end ML/DL pipelines covering EDA, feature engineering, model training, hyperparameter optimization, and deployment. Developed production-ready AI applications using Python, TensorFlow/Keras, Scikit-learn, and XGBoost, with deployments on Hugging Face Spaces.

Experience

Agentic AI Intern

Innomatics Research Labs, Hyderabad | Feb 2026 – May 2026

- Developed intelligent AI applications using Python, deep learning, and agentic AI workflows.
- Built and deployed REST APIs using FastAPI with validation, CRUD operations, and end-to-end backend development.
- Performed EDA, feature engineering, model training, hyperparameter tuning, and evaluation.
- Deployed production-ready ML/DL applications on Hugging Face Spaces using Streamlit.
- Collaborated on scalable AI-driven solutions across classification, regression, and computer vision tasks.

Technical Skills

- **Programming Languages:** Python, SQL
- **AI / Deep Learning:** TensorFlow, Keras, Scikit-learn, XGBoost, Bidirectional LSTM, RNN, NLP, Word2Vec, Optuna
- **ML Concepts:** Feature Engineering, EDA, Regression, Classification, R^2, MAE
- **Frameworks & APIs:** FastAPI, Streamlit, Pydantic, Uvicorn
- **Data & Analytics:** Pandas, NumPy, MySQL, Power BI, Cross-Validation
- **MLOps & Tools:** Git, GitHub, Hugging Face Spaces, Jupyter Notebook, VS Code

Projects

1. ***Product Reviews Sentiment Analysis using Bidirectional LSTM (NLP)***
   - Built a multiclass sentiment analysis model using **205K+ Flipkart product reviews** to classify customer feedback as **Positive, Neutral, and Negative**.
   - Preprocessed text data using tokenization, sequence padding, and pretrained **Word2Vec embeddings**, then trained a **Bidirectional LSTM** with dropout and Early Stopping to improve generalization.
   - Achieved **~92% validation accuracy** and deployed the trained model with a reusable inference pipeline for predicting sentiment on new product reviews.

Tech: Python, TensorFlow, Keras, NLP, Bidirectional LSTM, Word2Vec, Scikit-learn, Pandas, NumPy

2. ***Swiggy Delivery Time Prediction***
   - Built an ML pipeline on **45K+ delivery records** — outlier handling, label encoding, and feature selection.
   - Trained and tuned an XGBoost regressor; **achieved R^2 of 0.82** on held-out test data.
   - Deployed on Hugging Face Spaces via Streamlit for live predictions.

Tech: Python, Scikit-learn, XGBoost, Streamlit, Hugging Face Spaces

3. ***FastAPI Food Delivery Backend***
   - Built REST APIs for menu, cart, and orders with delivery charge logic and Pydantic request validation.
   - Handled CRUD, duplicate cart entries, availability guards, and checkout with grand total calculation.
   - Added search, filtering (category, price, availability), sorting, and pagination across menu endpoints.

Tech: Python, FastAPI, Pydantic, Uvicorn

Education

B. Tech (IT) – Aditya Silver Oak Institute of Technology, Ahmedabad | **CGPA:** 9.07/10 | 2021–2025

Certifications

Agentic AI Internship Certificate – Innomatics Research Labs | **Python (Gold-Badge)** – HackerRank

Machine Learning & Data Analytics – Infosys Springboard
