Education

Sreenidhi Institute of Science and Technology Sept 2022 – May 2026

- B.Tech, Electronics and Communication Engineering
- CGPA: 8.0/10.0

Skills

Languages: Python, SQL
AI/ML: Machine Learning, Deep Learning, NLP, Neural Networks, Generative AI, Prompt Engineering
LLM/GenAI: LangChain, OpenAI API, LLM Applications
Libraries/Frameworks: TensorFlow, Keras, Scikit-learn, Pandas, NumPy, Matplotlib, Seaborn
Tools: Streamlit, Github, PowerBI
Concepts: Data Preprocessing, Feature Engineering, EDA, Model Evaluation, OOP, DBMS, DSA

Experience

Software Intern, NukkadShops | Certificate May – Aug 2025

- Contributed to the development of an AI-based voice assistant application designed for integration with NukkadShops' retail dashboard platform used by 10,000+ stores.
- Worked on conversational interaction workflows and application testing, including functional testing and debugging to improve reliability and user experience.
- Developed and tested application components while collaborating with the team on an AI-powered voice interaction solution.

Projects

SkillSync AI – Personalized AI Learning Assistant | Linkedin

- Built a personalized AI learning assistant using LangChain, GPT-4o-mini, Prompt Engineering, and Streamlit.
- Implemented structured prompts and conversational memory to generate context-aware learning responses based on user preferences.

Resume Classification & Job Role Recommendation System | GitHub

- Developed an NLP-based resume classification system using Word2Vec and BiLSTM to classify resumes across 10 job-role categories.
- Built a recommendation pipeline that returns the top 5 relevant job roles with probability scores.

Predictive Maintenance of Heavy Vehicles using ML | GitHub

- Built an ML pipeline to predict vehicle failures using Random Forest, XGBoost, Gradient Boosting, and ensemble learning.
- Applied SMOTE and feature engineering, achieving 98.5% accuracy, precision, recall, and F1-score, and deployed predictions using Flask.

Uber Fare Prediction using ANN | GitHub

- Developed an Artificial Neural Network model to predict Uber fares using trip and temporal features.
- Used Optuna for hyperparameter optimization across network architecture, activation function, learning rate, optimizer, and batch size.
- Experimented with different neural network configurations to improve model performance.

Certifications

- Python Programming Certification – Innomatics Research Labs
- Power BI Certification – Innomatics Research Labs
- Exploratory Data Analysis Certification – Innomatics Research Labs
- Machine Learning Certification – Innomatics Research Labs
