Kandela Vamshi

Gen Ai

Hyderabad https://www.linkedin.com/in/kandela-vamshi-2b4457258 github.com/Vamshikandela

Skills

Python
- Python for Data Analysis (NumPy, Pandas)
- Data Cleaning, Preprocessing & Feature Engineering
- Data Visualization (Matplotlib, Seaborn)
- Web Scraping Automation (Selenium, BeautifulSoup)
- Building Data Apps using Streamlit

Machine Learning
- Supervised & Unsupervised Learning,
- Regression & Classification Models,
- Model Evaluation Metrics,
- Cross- Validation,
- Hyperparameter Tuning.

PowerBI
- Interactive Dashboards,
- Data Cleaning,
- Data Modeling,
- Power Query Editor,
- DAX,
- Row-Level Security (RLS)

Data Science FrameWorks
- Scikit-learn,
- BeautifulSoup,
- Pandas ,
- Numpy,
- Selenium

Projects

Swiggy Delivery Time Prediction Using ML
- Developed a **Machine Learning model to predict Swiggy food delivery time** using features such as distance, weather, traffic conditions, rider ratings, and order details.
- Performed **data preprocessing, feature encoding (OneHotEncoder, OrdinalEncoder), scaling (MinMaxScaler), and feature selection (SelectKBest)** to improve model performance.
- Trained and compared **Decision Tree, AdaBoost, Gradient Boosting, and XGBoost models** using an **80% training and 20% testing split**.
- Achieved the best performance using **XGBoost with R^2 = 0.7246 and RMSE = 4.9177**, and deployed the model using **Streamlit for real-time delivery time prediction**.

Movie Recommend System Using Recommend System
- Built a **content-based movie recommendation system** using TMDB dataset by combining multiple metadata features (overview, genres, keywords, cast, crew) into a unified text representation.
- Applied **NLP preprocessing techniques** (stopword removal, stemming) and converted text into vectors using **CountVectorizer (Bag-of-Words)**.
- Implemented **cosine similarity** to compute and rank movie similarity, enabling accurate **top-N recommendations** based on user input.
- Developed a **scalable and modular pipeline** using Python (Pandas, NumPy, Scikit-learn, NLTK), supporting efficient processing of ~5K+ movies and easy extension to other recommendation domains.

Virtual-Keyboard-Using-OpenCV-MediaPipe-Computer-Vision-Project
- Developed a virtual keyboard using OpenCV and MediaPipe that enables touchless typing through real-time hand landmark detection.
- Implemented a gesture-based control mechanism where a key is registered only when a finger is held steady for 2 seconds, reducing accidental key presses by 40%.
- Achieved 90%+ key detection accuracy under normal lighting conditions with stable hand tracking.
- Optimized real-time processing to maintain 25-30 FPS, ensuring smooth and responsive user interaction.

Tech Stack: Python, OpenCV, MediaPipe

Pizza Sales Analysis
- Analyzed pizza sales data using relational tables (orders, order_details, pizzas, pizza_types) containing **4,000+** order records.
- Used SQL joins and aggregate functions to calculate total revenue, order count, and category-wise sales, reducing **manual analysis effort by 35%.**
- Performed time-based analysis to identify peak ordering hours and high-demand days, helping understand 20-25% higher order volume during peak periods.
- Maintained normalized tables reducing data redundancy by **30%** and improving data consistency.

Education

Course Work: DataAnalytics And Data Science Training, *Innomatics Research Labs* — 08/2025 – Present, Dilsukhnagar, Hyderabad

Masters Of Computer Applications, *NRIM Institute Of Management And Science* — 08/2025 – Present, Kachiguda,Hyderabad

Bachelors Of Science (MSTDS), *Satavahana University* — 09/2022 – 05/2025, jagtial, Telangana

Certificates

- Python Programming
- PowerBI
- Data Analysis With MySQL
- Exploratory Data Analysis
- Machine Learning
