Ramani Sruthi

Aspiring Data Analyst

Hyderabad Linkedin GitHub

Education

Data Scientist, *Innomatics Research Labs* 2025 – 2026
• Coursework in Python, Statistics, Data Analysis, SQL + PowerBI Hyderabad

Bachelor of Science - Computer Science, *Vignan Degree College* 2022 – 2025
• Coursework in Programming Fundamentals, Computer Basics, Mathematics, and Problem Solving Shadnagar, Telangana

Skills

Mechine Learning
Scikit-learn, Supervised & Unsupervised Learning, Regression, Classification, Decision Trees, Random Forest, SVM, KNN, Model Training, Model Evaluation.

Power BI
Power BI workflow, Visualisation, Trend Data viz, Power Queries, Power Pivot, DAX, DA Expression, Web & RLS, Visual Interactions, Drill Through.

Advance Statistics
Descriptive Statistics, Probability Distribution, Data Gathering Techniques, Inferential Statistics.

SQL
MYSQL, NoSQL, CRUD operation, RDBMS, Data Exploration and Data Filtering, DQL and Operators, Clauses, Joins, Subqueries, Aggregations, Constraints, ACID.

Python
Anaconda, Jupyter Notebook, Colab Notebook, syntax, Identifiers & Operators, Array, Numpy, Data Manipulation, Pandas

Projects

Virtual Drag and Drop using AI
- Developed a computer vision application that allows users to drag and drop virtual objects using hand gestures without touching the screen.
- Implemented hand tracking using OpenCV and cvzone to detect finger positions and recognize interaction with objects.
- Designed a system to detect pinch gestures for selecting, dragging, and placing virtual elements on the screen.
- Processed real-time webcam input to track hand movements and update object positions dynamically.
- Created an interactive touchless interface demonstrating practical applications of AI in human-computer interaction.

Swiggy Delivery Time Prediction
- Engineered a machine learning regression model employing scikit-learn and TensorFlow, predicting food delivery time with 92% accuracy based on order attributes and logistical variables.
- Performed data preprocessing and feature engineering including handling missing values, encoding categorical variables, and scaling data.
- Trained and compared multiple ML algorithms to identify the best model for accurate delivery time prediction.
- Evaluated model performance using regression metrics such as MAE, MSE, and RMSE.
- Built a complete ML pipeline including data cleaning, model training, prediction, and performance evaluation to improve ETA accuracy.

CARS24 Web Scraping Project
- Designed and implemented a Python-based web scraping system to extract used car listing data from the CARS24 website for data analysis.
- Used Requests and BeautifulSoup libraries to access web pages and parse HTML content to retrieve car details.
- Extracted important information such as car name, price, model, fuel type, transmission, and location from CARS24 listings.
- Cleaned and structured the collected data using Pandas to prepare it for analysis and further processing.
- Generated a structured dataset of CARS24 car listings to support market analysis, price comparison, and data-driven insights in the used car industry.

Library Database Analysis
- Designed and structured a relational library database schema with tables for books, members, authors, categories, borrow/return history, and penalties.
- Performed SQL queries (JOIN, GROUP BY, HAVING, subqueries) to analyze book circulation, frequent borrowers, overdue records, and most demanded genres.
- Used aggregate functions and analytical queries to track book availability, usage trends, return delays, and resource utilization efficiency.
- Identified high-demand books, underutilized resources, and overdue patterns to help improve inventory management and borrowing policies.
- Created report-style query outputs for librarians and stakeholders to support decisions on stocking, purchasing, and managing member engagement.

Telecom Customer Churn Analysis
- Cleaned and transformed raw customer data using Power Query to ensure accuracy and consistency for analysis.
- Built an interactive Power BI dashboard to monitor churn rate, customer retention, and key customer segments.
- Created DAX measures to calculate churn percentage, average tenure, and revenue impact of churned customers.
- Analyzed churn drivers based on contract type, monthly charges, services, and tenure to identify high-risk customers.
- Delivered actionable business insights and recommendations to help reduce customer churn and improve retention.

Certificates

Certification in data science
Innomatics Research labs

Certification in Power BI
Innomatics Research labs

Certification in MYSQL
Innomatics Research labs

Certification in EDA
Innomatics Research labs
