Professional Experience

Data Science Trainee Aug 2025 – March 2026
Innomatics Research Labs *Hyderabad*

- Prepared **analysis-ready datasets** using **Python** and **SQL**, including data cleaning and preprocessing.
- Conducted **EDA** to uncover patterns and insights for data-driven decisions.
- Built and evaluated **baseline ML models** using **scikit-learn** for regression and classification tasks.

Project Analyst June 2024 – July 2025
Aratek Innovation Private Limited *Hyderabad*

- Gathered and analyzed requirements, prepared reports, and captured key **project metrics** for stakeholders.
- Reviewed **L0 & L1 biometric product** deliverables and tracked progress using **Azure Boards**.
- Managed meeting coordination, **MoM documentation**, and regular project status reporting to stakeholders.

Technical Skills

Programming: Python, SQL
Data Analysis: Pandas, NumPy, Data Cleaning, Data Preprocessing, Exploratory Data Analysis (EDA)
Machine Learning: Scikit-learn, Supervised & Unsupervised Learning, Regression, Classification, Model Evaluation, Feature Engineering,Clustering
Computer Vision: Image Processing, OpenCV
Natural Language Processing: Text Preprocessing, NLP Techniques
Data Visualization: Matplotlib, Seaborn, Power BI

Projects

Job Market Analytics using Naukri Data | *Python, Pandas, Data Visualization* | GitHub

- Collected and processed **5000+ job postings**, creating **analysis-ready datasets** for market insights.
- Reduced data inconsistencies by **35%** through systematic **cleaning, preprocessing, and EDA**.
- Delivered **5+ actionable insights** on **in-demand skills, salary ranges, and location-wise trends**.

Swiggy Delivery Time Prediction | *Python, Pandas, scikit-learn, Streamlit* | GitHub

- Built an end-to-end **delivery time prediction (ETA) system** using rider, order, location, traffic, weather, and temporal features.
- Performed **data cleaning, EDA, feature engineering, encoding, and scaling**, and trained multiple regression models with cross-validation and hyperparameter tuning.
- Selected the best model using **RMSE, MAE, and R^2** and deployed a **Streamlit app on Hugging Face Spaces** for real-time predictions.

AI Virtual Mouse using Computer Vision | *Python, OpenCV, MediaPipe* | GitHub

- Developed a real-time **AI Virtual Mouse** using **hand gesture recognition** with OpenCV and MediaPipe.
- Enabled touch-free system control including **cursor movement, click, scroll, opening folders, and taking screenshots**.
- Optimized the detection pipeline for **real-time, low-latency performance** using efficient Computer Vision techniques, enabling robust and accurate hand landmark tracking.

Certificates

- Python Programming – **INNOMATICS** (Link)
- Machine Learning Foundation – **NASSCOM** (Link)
- Power BI – **INNOMATICS** (Link)

Education

St. Mary's Group of Institutions Hyderabad
Bachelor of Technology in Computer Science Engineering *July 2019 – Aug 2023*
