EDUCATION

Innomatics Research Science 07/2025
Data Science Hyderabad, India
Coursework in Python, Statistics, SQL , PowerBI, ML

Andhra University 06/2019 – 04/2022
Bachelor of Science - Chemistry vizianagaram, India

SKILLS

PYTHON
- Python: Anaconda, Jupyter Notebook,Google Colab, Identifiers & Operators,Data Types,Conditional Statements,Functions.

Power BI
- Power BI workflow, Power Query,Visualisation, Trend Data viz, Modeling Building,Power Queries,Power Pivot, DAX,ETL, Web & RLS, Visual Interactions.

Advanced Statistics
- Descriptive Statistics, Data Collection,Data cleaning, Data Manupulation,Data Visualization,File Handling,Probability,Discreate Probability Distribution, Inferential Statistics,Hypothesis Testing.

Deep Learning
- AI, MLAND DL, Biological Neuron, Google Colab, Tensorflow, Neural Network, Forward & Backward Propagation,Optimizers, MLP

Natural Language processing
- NLTK, spacy, BOW, TF-IDF, Glove, Fast text, RNNs, LSTMs, AutoEncoders, BERT

SQL
- MYSQL, CRUD operation, RDBMS, DQL and Operators, Constraints,Aggeration Functions,Clauses, Joins, ACID, COMMIT, ROLLBACK,Set Operations,Triggers,Window Functions.

EDA
- Pandas, Matplotlib, Seaborn, Data Cleaning, Missing Value & OutlierHandling, Descriptive Statistics, Univariate-Bivariate-Multivariate Analysis, Correlation Analysis, Data Transformation,Feature Understanding, Pattern & Trend Identification, Insight Generation.

Machine Learning
- Scikit-Learn,Supervised, Unsupervised, ML Algorithms, Validation Methods, Naive Bayes, Linear Algebra, K-NN, Hyperparameters, Dimensionality, Decision Tree, Linear regression, Evaluation Metrics, Feature Engineering,Cross ValidationRegression Techniques, Q-Q Plot, MSE & RMSE, Polynomial regression, Regularization Techniques, Logistic Regression.

CNN & Computer Vision
- Open CV, Convolutional, TransferLearing

PROJECTS

1.EDA Using Python Libraries
- Scraped and analyzed 984 refrigerator listings from Flipkart using Python and BeautifulSoup.
- Cleaned and performed exploratory data analysis (EDA) using Pandas, Matplotlib, and Seaborn to identify brand trends and price patterns.
- Achieved 90% data extraction accuracy and generated insights to support product and pricing decisions.

2.Blood Management Analysis
- Analyzed blood donation/inventory data using MySQL across 7 tables (Donor, BloodBank, Blood, Patient, Hospital, Donation, Recipient) to identify availability patterns across blood banks and time periods.
- Applied SQL joins, aggregations, subqueries to evaluate low-stock levels, donor eligibility, and donation trends.
- Generated actionable insights to improve blood bank inventory management and support healthcare decision-making.

3.Pizza Sales Analysis
- Analyzed 40K+ pizza sales records to identify revenue trends, order patterns, and product performance.
- Built an interactive Power BI dashboard with KPIs such as Total Revenue, Total Orders, and Average Order Value using DAX.
- Performed data cleaning using Power Query and identified top-selling pizzas and peak sales hours for business insights.

4.Gesture-Based Medical Communication System
- Developed real-time gesture recognition system using Python, OpenCV, and MediaPipe for non-verbal patient communication.
- Applied MediaPipe hand landmark detection to classify gestures (Emergency, Help, Water, Food, Pain) accurately.
- Achieved 92% accuracy on 100+ tests with bounding boxes/labels, enabling faster caregiver response

5.Swiggy Delivery Time Predictions Using ML
- Developed a machine learning model to predict Swiggy delivery times using regression techniques, improving accuracy and reliability of time estimates.
- Compared multiple models (KNN, Linear Regression, Random Forest, Gradient Boosting) and achieved best performance with Random Forest (MAE: 3.19, R^2: 0.82).

- Applied data preprocessing, feature engineering, and evaluation metrics (MAE, RMSE, R^2) to optimize predictive performance for real-world delivery scenarios.

6.Credict Card Fraud Detection
- Built a deep learning model (ANN) to detect fraudulent credit card transactions using TensorFlow/Keras.
- Handled data preprocessing, feature engineering, and class imbalance with SMOTE/undersampling to improve accuracy.
- Deployed a Streamlit app for real-time fraud detection with high recall to reduce false negatives.

7.AI Travel Assistant & Journey Recommendation Engine
- Built an intelligent travel planning platform using Python, Streamlit, LangChain, and OpenAI GPT-4o-mini.
- Developed features for personalized trip planning, dynamic itinerary generation, smart budget estimation, and AI-powered packing checklists.
- Delivered a conversational travel chatbot with real-time destination insights, safety tips, and an interactive multi-tab dashboard.

CERTIFICATES

- Certified in Python for Data Analysis
- Certified in MySQL
- Certified in Machine Learning
- Certified in Exploratory Data Analysis
- Certified in Power BI
