PROFILE

Entry-level Data Scientist with strong foundations in Python, Machine Learning, and statistical analysis. Experienced in building predictive models, performing data preprocessing, and conducting Exploratory Data Analysis (EDA) on real-world datasets.
Skilled in algorithms such as regression, classification, and clustering, with hands-on project experience in customer segmentation and predictive analytics. Familiar with NLP, Deep Learning basics, and data visualization tools.

SKILLS

Programming & Querying: Python, SQL
Data Analysis & Tools: Microsoft Excel (VLOOKUP, Pivot Tables, Data Cleaning), Google Sheets
Data Visualization: Matplotlib, Seaborn, Power BI (Dashboarding)
Machine Learning: Linear Regression, Logistic Regression, Decision Trees, Random Forest, K-Means Clustering
Data Processing: Data Cleaning, Exploratory Data Analysis (EDA), Feature Engineering
Statistics: Descriptive Statistics, Probability, Hypothesis Testing
Computer Vision: Basic Image Processing, CNN (Project-based understanding)
Natural Language Processing: Text Preprocessing, TF-IDF, Basic Text Classification
Generative AI: Prompt Engineering, Basic understanding of LLMs, API usage (beginner level)
Tools & Platforms: Jupyter Notebook, Google Colab, GitHub
Soft Skills: Problem Solving, Communication, Attention to Detail

PROJECTS

Zomato Restaurant Analytics | EDA, Python
- Scraped 2,000+ restaurant records using Python (Selenium) and structured data for analysis.
- Cleaned and preprocessed data using Pandas (missing values, duplicates, standardization).
- Performed EDA with Matplotlib & Seaborn to analyze ratings, pricing, cuisines, and delivery trends.
- Applied Chi-Square hypothesis testing to identify relationships between restaurant type and location.
- Delivered actionable insights to improve delivery performance and customer experience.
- Tech Stack: Python, Selenium, Pandas, NumPy, Matplotlib, Seaborn

Swiggy Delivery Time Prediction (Machine Learning Project)
- Built a regression model to estimate delivery time using features such as distance, traffic, and weather conditions
- Conducted data preprocessing, feature engineering, and Exploratory Data Analysis (EDA) to enhance data quality
- Trained and compared models including Linear Regression and Random Forest, evaluated using RMSE and R^2 score
- Generated insights to improve delivery efficiency and support data-driven decision-making
- Tech Stack: Python, Pandas, NumPy, Scikit-learn, Matplotlib, Seaborn

Hand Gesture Presentation System using OpenCV
- Designed a real-time hand gesture recognition system for touchless presentation control
- Utilized computer vision techniques and hand tracking for gesture-based slide navigation
- Processed live video streams to accurately detect and interpret user gestures
- Improved user interaction through an intuitive, contact-free control mechanism
- Tech Stack: Python, OpenCV, MediaPipe, NumPy

Gender Classification using CNN (Computer Vision Project)
- Built a CNN-based image classification model to identify gender from facial images
- Applied image preprocessing techniques including resizing and normalization for better accuracy
- Trained and validated the model using deep learning frameworks to achieve reliable predictions
- Leveraged Python, TensorFlow/Keras, and OpenCV for model development and image processing
- Tech Stack: Python, TensorFlow/Keras, OpenCV, NumPy

EDUCATION

Data Science Certification – Innomatics Research Labs - 2025
Relevant Coursework: Python, SQL, Power BI, Statistics, EDA, ML, CV, NLP

B.Tech in Computer Science (Data Science) – 2025
St. Mary's Group of Institutions

CERTIFICATES

- Innomatics Research Labs - Python Programming | SQL | Power BI
- CISCO Networking Academy - Data Analytics Course Completion
